Distribution of Recent Benthic Foraminifera in the Caribbean Region

STEPHEN J. CULVER
and MARTIN A. BUZAS

SMITHSONIAN CONTRIBUTIONS TO THE MARINE SCIENCES

NUMBER 14

SERIES PUBLICATIONS OF THE SMITHSONIAN INSTITUTION

Emphasis upon publication as a means of "diffusing knowledge" was expressed by the first Secretary of the Smithsonian. In his formal plan for the Institution, Joseph Henry outlined a program that included the following statement: "It is proposed to publish a series of reports, giving an account of the new discoveries in science, and of the changes made from year to year in all branches of knowledge." This theme of basic research has been adhered to through the years by thousands of titles issued in series publications under the Smithsonian imprint, commencing with *Smithsonian Contributions to Knowledge* in 1848 and continuing with the following active series:

Smithsonian Contributions to Anthropology
Smithsonian Contributions to Astrophysics
Smithsonian Contributions to Botany
Smithsonian Contributions to the Earth Sciences
Smithsonian Contributions to the Marine Sciences
Smithsonian Contributions to Paleobiology
Smithsonian Contributions to Zoology
Smithsonian Studies in Air and Space
Smithsonian Studies in History and Technology

In these series, the Institution publishes small papers and full-scale monographs that report the research and collections of its various museums and bureaux or of professional colleagues in the world of science and scholarship. The publications are distributed by mailing lists to libraries, universities, and similar institutions throughout the world.

Papers or monographs submitted for series publication are received by the Smithsonian Institution Press, subject to its own review for format and style, only through departments of the various Smithsonian museums or bureaux, where the manuscripts are given substantive review. Press requirements for manuscript and art preparation are outlined on the inside back cover.

ABSTRACT

Culver, Stephen J., and Martin A. Buzas. Distribution of Recent Benthic Foraminifera in the Caribbean Region. *Smithsonian Contributions to the Marine Sciences*, number 14, 382 pages, 131 figures, 1982.—A computer file of all published distributional data (presence or absence) on the living and dead recent benthic foraminifera in the Caribbean region was constructed from 99 papers published since 1839. Manipulation of this file produced 5 catalogs and 131 maps.

Catalog 1 lists alphabetically species names with publication and locality information as recorded in the literature (i.e., unsynonymized). Catalog 2 lists synonymized species names with publication and locality information. Catalogs 3 and 4 list alphabetically all unsynonymized and synonymized species names, respectively. Catalog 5 lists synonymized names by increasing latitude and longitude.

During the past 140 years, 1868 names have been used to record benthic foraminifera in the Caribbean region. Through synonymization, this number was reduced to 1189, of which 130 occur at 13 or more of the 338 sample localities. Computer-generated maps were drawn for these 130 most commonly recorded species.

The majority of these species were assigned to a ubiquitous geographic distribution category and, because most samples are restricted to shallow shelf areas, to a shallow shelf depth distribution category. Only 14 species do not conform to these distribution patterns.

Because of the sample framework, no conclusions can be reached with regard to possible foraminiferal provincial subdivisions within the Caribbean region.

OFFICIAL PUBLICATION DATE is handstamped in a limited number of initial copies and is recorded in the Institution's annual report, *Smithsonian Year*. SERIES COVER DESIGN: Seascape along the Atlantic coast of eastern North America.

Distribution of Recent Benthic Foraminifera in the Caribbean Region

*Stephen J. Culver
and Martin A. Buzas*

Introduction

Study of the recent benthic foraminifera in the Caribbean region began in 1839 when d'Orbigny published his classic work on the foraminifera of Cuba. Since then, many other workers have contributed papers on the taxonomy, distribution, and ecology of Caribbean benthic foraminifera. One hundred thirty-six papers concerning Caribbean region foraminifera were published between 1839 and 1979. This paper represents the first attempt to synthesize these data and is the third of a series including and summarizing all published data on the distribution of recent benthic foraminifera around North America. All published distributional data for the east coast is presented in Culver and Buzas (1980) and the results of subsequent analysis are given in Buzas and Culver (1980), Culver and Buzas (1981a; 1981b; 1982). Gulf of Mexico data are given in Culver and Buzas (1981c) and the preliminary results of analysis in Culver and Buzas (1981d; 1982).

The work presented here can be divided into three main parts. First, there is a references section consisting of (1) the 99 papers used in com-

piling the presence-absence data utilized by this study and (2) additional references that are cited in this paper. Second, there are five computer-generated catalogs listing every species ever recorded in publications on the Caribbean region. Third, there are computer-generated maps of the 130 most commonly recorded species together with a map showing all sample localities in the Caribbean region. Explanatory notes for the catalogs and maps can be found later in this introduction.

Following the format of our studies of the benthic foraminifera off the east coast of North America and in the Gulf of Mexico, we have included a key to our concept of each of the 130 most commonly recorded species of the Caribbean Region.

METHODS.—The computerization methods utilized in this work were the same as those described in detail in Culver and Buzas (1980). Of the 136 papers published on the benthic foraminifera of the Caribbean region, 99 contained data in a form enabling their incorporation in this study. All that was required was the name of one or more species (living or dead) and the locality where found. The information typed into the basic compilation file consisted of (1) author of publication, (2) date of publication, (3) generic name used in publication, (4) specific name used

Stephen J. Culver, Department of Geophysical Sciences, Old Dominion University, Norfolk, Va. 23508. Martin A. Buzas, Department of Paleobiology, Smithsonian Institution, Washington, D.C. 20560.

in publication, (5) locality, (6) latitude and longitude. (Note: because of poor printout, some zeros in Catalog 1 appear to be "C's.").

When numerous sample sites of a particular study were in very close proximity they were summarized by a single or several representative localities. Thus, all species recorded in the sampled area were considered to have been found at the representative points. In a very few cases, where no detailed locality information was given, a point was arbitrarily chosen to be representative for the records in question. Modification and sorting of this basic data file resulted in the production of five catalogs that are described below. The 131 maps in this publication are also computer generated and were drawn on a Cal-comp Plotter.

THE CATALOGS.—Five catalogs are included in this section and are designed to enable the reader to have rapid access to all published distributional data on recent benthic foraminifera in the Caribbean region. Catalog 1 lists (alphabetically by binomen) all the records of every species ever recorded in the study area and also includes publication and locality information. This catalog contains almost 7000 entries and approximately 35,000 pieces of information. Catalog 2 is the synonymized version of Catalog 1. This list is identical to Catalog 1 except that generic and specific names have been changed where necessary. To aid referral between Catalogs 1 and 2, line numbers starting at 10001 are included at the lefthand margin of the files. Thus, for example, it can be seen that *Trifarina bella* from SW Puerto Rico (Catalog 2, line 10280) was originally recorded (Seiglie, 1975) as *Angulogerina bella* (Catalog 1, line 10280).

Catalogs 3 and 4 aid rapid use of the first two catalogs. Catalog 3 is an alphabetized list of the 1868 taxa that have been recorded in the Caribbean region. Catalog 4 lists alphabetically the 1189 species recorded in this area after synonymization achieved by reference to published illustrations and specimens lodged in the USNM collections (National Museum of Natural History, Smithsonian Institution) and the British Museum

(Natural History) collections. Catalogs 3 and 4, therefore, are derived directly from Catalogs 1 and 2 respectively.

Catalog 5 is intended for the researcher interested in specific areas. This catalog contains alphabetized lists of synonymized species for each locality (localities are listed by increasing latitude and longitude). If, in the case of a synonymized species, the investigator questions the generic or specific name used, he can refer to Catalogs 1 and 2 to find the original name used by the author of the publication in which that species was recorded.

THE MAPS.—One hundred thirty-one computer-generated maps are included in this section and, like the catalogs, are provided as a reference tool for use in distributional studies of recent benthic foraminifera. Figure 1 illustrates the distribution of all the 338 sample localities included in this study. The 183 m and 1830 m submarine contours roughly approximate the edge of the continental shelf and the bottom of the continental slope, respectively. The distribution of the sample localities must be taken into account when examining the maps illustrating the distributions of species.

Figures 2–131 are computer-generated maps of the 130 most commonly recorded species. These are species that have been recorded 13 times or more, or at approximately 4% or more of the 338 localities: the figure of 4% was chosen arbitrarily to achieve conformity with the studies of the Atlantic continental margin of North America and the Gulf of Mexico (Culver and Buzas, 1980; 1981c) where maps were drawn also for those species that have been recorded at approximately 4% or more of the localities in question. The maps are arranged alphabetically by genera and by species within each genus.

ACKNOWLEDGMENTS.—We thank Dante Piacesi and Ken McCormick for their considerable efforts in the computer production of this work. Angela Lanham contributed invaluable library research and secretarial services. C. G. Adams kindly allowed access to British Museum (Natural History) collections.

Discussion

The main purpose of this publication is to present all the published distributional data of the recent benthic foraminifera in the Caribbean region. A total of 1868 taxa have been recorded in the Caribbean region from 338 localities. Synonymization reduced this number to 1189. Of these 1189 species, 130 occurred at 13 or more of the 338 localities; that is, only 11% of the species occur at 4% or more of the sample localities. In other words, the vast majority of species are rare.

Figure 1 ("All Localities") shows that study of recent benthic foraminifera in the Caribbean region has been uneven in its emphasis. The vast majority of localities are restricted to coastal or shallow shelf areas. Indeed, samples off the Venezuela shelf around 68°W that appear to be at slope depths are in fact shallow-water samples from round such islands as Aruba, Curaçao, Bonaire, Los Roques. These islands were too small to be digitized. The same applies to other apparently deeper-water records south of Jamaica and off the Nicaraguan shelf. The deepest parts of the Caribbean Sea, until now, have been virgin territory for benthic foraminiferal studies; however, reports are being prepared on the Grenada and Venezuela Basin foraminifera (B. Sen Gupta, pers. comm.).

We attempted to arrange the 130 most commonly recorded species into depth and geographic distribution categories by visual examination of their maps (compare Culver and Buzas, 1980; 1981c). The sampling framework, however, precluded any recognizable patterns from emerging. The vast majority of species could be assigned to ubiquitous geographic and shallow shelf depth distributions. There are 14 exceptions:

- Bolivina pseudoplicata* (Figure 15), records restricted to the eastern Caribbean
- Bulimina aculeata* (Figure 21), most records between approximately 200 and 2000 m in the eastern Caribbean
- Bulimina marginata* (Figure 22), some slope records off Venezuela in addition to shallow shelf occurrences
- Cassidulina subglobosa* (Figure 25), recorded at shelf and slope localities around the Caribbean
- Cibicides pseudoungerianus* (Figure 27), recorded at shelf and slope localities around the Caribbean

- Dentalina communis* (Figure 32), some slope records in the eastern Caribbean in addition to shallow shelf occurrences
- Hanzawaia concentrica* (Figure 47), two slope records off Venezuela in addition to shallow shelf occurrences
- Hoeglundina elegans* (Figure 51), several slope records in the eastern Caribbean
- Nodobaculariella mexicana* (Figure 62), recorded only in the northern Caribbean
- Robertinoides bradyi* (Figure 95), most records between approximately 200 and 2000 m in the eastern Caribbean
- Spirillina vivipara* (Figure 108), some slope records off Venezuela in addition to shallow shelf occurrences
- Textularia calva* (Figure 114), some slope records off Cuba in addition to shallow shelf occurrences
- Textulariella barrettii* (Figure 117), records restricted to the eastern Caribbean with the exception of one Jamaican record
- Uvigerina peregrina* (Figure 130), records restricted to the eastern Caribbean between 0 and 2000 m

Just as the investigation of depth and geographic distribution of individual species in the Caribbean region is hampered by the concentration of sample sites on the continental shelf, so is the investigation of marine zoogeographic provinces. Several provincial schemes have been proposed for the Caribbean–Gulf of Mexico region based on macrofaunal data. One scheme (Hall, 1964) includes the Caribbean and the whole Gulf of Mexico in a single Caribbean Province, while another scheme (Hedgpeth, 1953; Rehder, 1954; Warmke and Abbott, 1961) includes only the southern half of the Gulf of Mexico (plus the southern tip of Florida) with the Caribbean region in a Caribbean Province. Briggs (1974) suggested further subdivision by separating the West Indian islands from the Caribbean Province as the West Indian Province.

Recent benthic foraminiferal provincial schemes for the eastern continental margin of North America (Buzas and Culver, 1980) and for the Gulf of Mexico (Culver and Buzas, 1981d) differ from macrofaunal provinces. Elucidation of foraminiferal provinces in the whole Caribbean–Gulf of Mexico area is dependent upon close comparison of the foraminiferal faunas and will be the subject of a future publication. For the present it can be noted that foraminiferal species diversity is much higher in the Caribbean region

than in the Gulf of Mexico (1189 species versus 848 species respectively).

Summary

1. All published data on the distribution of recent benthic foraminifera in the Caribbean region are presented in the form of 5 catalogs and 131 maps.

2. 1868 taxa have been recorded in the area of study.

3. The taxa have been reduced to 1189 by synonymization.

4. Of the 1189 synonymized species, 130 occur at 13 or more of the sample locations; that is, 11% of the species occur at 4% or more of the 338 sample localities.

5. The restriction of most sample sites to shelf areas results in the majority of the 130 most commonly recorded species having a shallow shelf depth distribution.

6. Most of these 130 species have a ubiquitous geographic distribution in the Caribbean region.

7. Fourteen species exhibit distributions that differ from the norm.

8. The relationship between the Caribbean region and the Gulf of Mexico in terms of foraminiferal zoogeography awaits further study.

9. Foraminiferal species diversity is higher in the Caribbean region (1189 species) than in the Gulf of Mexico (848 species) or on the eastern continental margin of North America (876 species).

Key to the Species on the Maps

Following Culver and Buzas (1980; 1981c) we list below a key to our concept of the 130 most commonly recorded species in the Caribbean region. Genera are listed alphabetically as are the species within each genus. Under each species, the reference or references are given where the reader can find published illustrations that adequately convey our concept of each of the commonly recorded species in this study. Many of the 130 species were also included in the keys to commonly recorded species for the east coast of North America and for the Gulf of Mexico (Cul-

ver and Buzas, 1980; 1981c); the references given here for these species are generally the same.

INDEX TO PUBLICATIONS THAT ILLUSTRATE OUR CONCEPT OF THE 130 MOST COMMONLY RECORDED SPECIES

- Ammobaculites exiguus* Cushman and Bronnimann: Ellison and Nichols, 1970:15, pl. 2: fig. 6 [as *Ammobaculites* cf. *A. exiguus*].
- Ammonia beccarii* (Linné): Schnitker, 1974:217–223, pl. 1.
- Amphisorus hemprichii* Ehrenberg: Cushman, 1930:51, pl. 18: figs. 5–7.
- Amphistegina gibbosa* d'Orbigny: d'Orbigny, 1839:120, pl. 8: figs. 1–3. Crouch and Poag, 1979:91–92, pls. 1–4.
- Archaias angulatus* (Fichtel and Moll): Cushman, 1930:46, pl. 16: figs. 1–3, pl. 17: figs. 3–5.
- Archaias compressus* (d'Orbigny): Sen Gupta and Schafer, 1973:357, pl. 1: fig. 13 [as *Cyclorbiculina compressa*].
- Articulina sagra* d'Orbigny: Todd and Low, 1971:C10, pl. 1: fig. 9.
- Asterigerina carinata* d'Orbigny: Cushman, 1931:77, pl. 15: figs. 4, 5.
- Bigennerina irregularis* Phleger and Parker: Phleger and Parker, 1951:4, pl. 1: figs. 16–21.
- Bigennerina textularioidea* (Goës): Goës, 1894:41, pl. 8: figs. 387–399 [as *Clavulina textularioidea*]. Parker, 1954:492, pl. 3: figs. 4, 5.

- Quinqueloculina biocostata* d'Orbigny: Phleger and Parker, 1951:7, pl. 3: fig. 15a,b.
- Quinqueloculina bidentata* d'Orbigny: Cushman, 1921:65, pl. 15: figs. 11, 12. Sen Gupta and Schafer, 1973:359, pl. 1: fig. 3.
- Quinqueloculina bosciana* d'Orbigny: Schnitker, 1971:208, pl. 2: fig. 13.

- Quinqueloculina bradyana* Cushman: Cushman, 1917:52, pl. 18: fig. 2a-c.
- Quinqueloculina candeiana* d'Orbigny: d'Orbigny, 1839:170, pl. 12: figs. 24-26. Sen Gupta and Schafer, 1973:359, pl. 1: fig. 4.
- Quinqueloculina cuvieriana* d'Orbigny: Cushman, 1921:66, pl. 16: figs. 1, 2.
- Quinqueloculina lamarckiana* d'Orbigny: Schnitker, 1971:208, pl. 3: fig. 16.
- Quinqueloculina poeyana* d'Orbigny: Schnitker, 1971:208, pl. 2, fig. 17.
- Quinqueloculina polygona* d'Orbigny: Parker, 1954:497, pl. 4: figs. 7, 8.
- Quinqueloculina seminula* (Linné): Sen Gupta, 1971:85, pl. 1: figs. 25-27.
- Quinqueloculina subpoeyana* Cushman: Bermudez and Seiglie, 1963:141, pl. 9: fig. 6.
- Quinqueloculina tricarinata* d'Orbigny: Cushman, 1921:68, pl. 16: figs. 11, 12.
- Rectobolivina advena* (Cushman): Schnitker, 1971:208, pl. 4: fig. 26.
- Rectobolivina limbata* (Brady): Brady, 1884:419, pl. 52: figs. 26-28 [as *Bolivina limbata*]. Sellier de Civrieux, 1976a:29, pl. 28: figs. 2-12 [as *Loxostomina limbata*].
- Rectobolivina mayori* (Cushman): Cushman, 1922a:27, pl. 3: figs. 5-6 [as *Bolivina mayori*]. Sellier de Civrieux, 1976a:30, pl. 29: figs. 4-10 [as *Loxostomina mayori*].
- Rectobolivina raphana* (Parker and Jones): Cushman, 1922a:35, pl. 5: fig. 5 [as *Siphogenerina raphanus*]. Buzas, Smith, and Beem, 1977:80, pl. 3: figs. 1, 2 [as *Rectobolivina raphana*?].
- Reussella atlantica* (Cushman): Schnitker, 1971:210, pl. 5: fig. 8.
- Robertinoides bradyi* (Cushman and Parker): Parker, 1954:510, pl. 6: fig. 18 [as *Robertina bradyi*].
- Rosalina advena* (Cushman): Cushman, 1931:13, pl. 2: fig. 8a-c [as *Discorbis advena*]. Todd and Bronnimann, 1957:38, pl. 11: fig. 2a,b [as *Streblus advenus*].
- Rosalina bahamaensis* Todd and Low: Todd and Low, 1971:C14, pl. 3: fig. 2a-c. Buzas, Smith, and Beem, 1977:85, pl. 4: figs. 1-3 [as *Rosalina candeiana*].
- Rosalina floridana* (Cushman): Schnitker, 1971:210, pl. 5: fig. 19.
- Rosalina floridensis* (Cushman): Parker, 1954:525, pl. 8: figs. 28, 29.
- Rosalina globularis* d'Orbigny: Cushman, 1931:22, pl. 4: fig. 9a-c [as *Discorbis globularis*].
- Rosalina subaraucana* (Cushman): Cushman, 1922a:41, pl. 7: figs. 1, 2 [as *Discorbis subaraucana*]. Buzas, Smith, and Beem, 1977:86, pl. 4: figs. 13-15.
- Rosalina valvulata* d'Orbigny: Cushman, 1931:33, pl. 7: fig. 3a-c [as *Discorbis valvulata*].
- Sagrina pulchella* d'Orbigny: Buzas, Smith, and Beem, 1977:81, pl. 3: figs. 3-6.
- Scutuloris dilatata* (d'Orbigny): Cushman, 1921:67, pl. 16: figs. 5, 6 [as *Quinqueloculina dilatata*].
- Sigmavirgulina tortuosa* (Brady): Buzas, Smith, and Beem, 1977:103, pl. 8: figs. 9-12.
- Siphonina pulchra* Cushman: Phleger and Parker, 1951:24, pl. 12: fig. 15a,b.
- Sorites marginalis* (Lamarck): Cushman, 1930:49, pl. 18: figs. 1-4.
- Spirillina vivipara* Ehrenberg: Cushman, 1931:3, pl. 1: figs. 1-4.
- Spirolina acicularis* (Batsch): Bermudez and Seiglie, 1963:160, pl. 15: figs. 7, 8.
- Spiroloculina antillarum* d'Orbigny: Cushman, 1921:63, pl. 14: figs. 14, 15. Cushman, 1941a:4, pl. 1: figs. 12-15.
- Spiroloculina arenata* Cushman: Cushman, 1929:44, pl. 9: fig. 5a,b.
- Spiroplectammina floridana* (Cushman): Phleger and Parker, 1951:4, pl. 1: figs. 25, 26.
- Textularia agglutinans* d'Orbigny: Todd and Bronnimann, 1957:24, pl. 2: fig. 13.
- Textularia calva* Lalicker: Lalicker and Bermudez, 1941:7, pl. 2: figs. 2, 3.
- Textularia candeiana* d'Orbigny: Schnitker, 1971:212, pl. 1: fig. 10.
- Textularia conica* d'Orbigny: Schnitker, 1971:212, pl. 1: fig. 11.
- Textulariella barrettii* (Jones and Parker): Cushman, 1922b:20, pl. 3: figs. 3-6 [as *Textularia barrettii*]. Parker, 1954:491, pl. 2: fig. 11.
- Trichohyalus aguayoi* (Bermudez): Todd and Bronnimann, 1957:37, pl. 9: fig. 24a-c [as *Discorbis? aguayoi*]. Bermudez and Seiglie, 1963:176, pl. 26: fig. 4a,b.
- Triloculina bicarinata* d'Orbigny: Bermudez and Seiglie, 1963:178, pl. 10: figs. 4, 5.
- Triloculina carinata* d'Orbigny: Cushman, 1929:65, pl. 17: fig. 4.
- Triloculina linneiana* d'Orbigny: Cushman, 1929:61, pl. 16: figs. 1, 2.
- Triloculina oblonga* (Montagu): Todd and Bronnimann, 1957:27, pl. 3: figs. 15, 16.
- Triloculina planiana* d'Orbigny: Cushman, 1921:70, pl. 17: figs. 7, 8. Cushman, 1929:62, pl. 15: figs. 5, 6.
- Triloculina quadrilateralis* d'Orbigny: Brooks, 1973, pl. 2: figs. 10-12.
- Triloculina rotunda* d'Orbigny: Cushman, 1929:59, pl. 14: fig. 3a-c.
- Triloculina transversestriata* (Brady): Bermudez and Seiglie, 1963:181, pl. 12: fig. 7a-c.
- Triloculina tricarinata* d'Orbigny: Parker, 1954:500, pl. 4: fig. 22.
- Triloculina trigonula* (Lamarck): Schnitker, 1971:212, pl. 3: fig. 11.
- Trochammina inflata* (Montagu): Parker, 1952:459, pl. 3: fig. 1a,b.
- Uvigerina peregrina* Cushman: Cushman, 1923:166, pl. 42: figs. 7-10. Pflum and Frerichs, 1976:108, pl. 8: figs. 2, 3 [as *Uvigerina peregrina peregrina*].
- Valvulina oviedoiana* d'Orbigny: Cushman, 1922a:29, pl. 2: figs. 7, 8.

REQUIREMENTS FOR SMITHSONIAN SERIES PUBLICATION

Manuscripts intended for series publication receive substantive review within their originating Smithsonian museums or offices and are submitted to the Smithsonian Institution Press with approval of the appropriate museum authority on Form SI-36. Requests for special treatment—use of color, foldouts, casebound covers, etc.—require, on the same form, the added approval of designated committees or museum directors.

Review of manuscripts and art by the Press for requirements of series format and style, completeness and clarity of copy, and arrangement of all material, as outlined below, will govern, within the judgment of the Press, acceptance or rejection of the manuscripts and art.

Copy must be typewritten, double-spaced, on one side of standard white bond paper, with 1¼" margins, submitted as ribbon copy (not carbon or xerox), in loose sheets (not stapled or bound), and accompanied by original art. Minimum acceptable length is 30 pages.

Front matter (preceding the text) should include: **title page** with only title and author and no other information, **abstract page** with author/title/series/etc., following the established format, **table of contents** with indents reflecting the heads and structure of the paper.

First page of text should carry the title and author at the top of the page and an unnumbered footnote at the bottom consisting of author's name and professional mailing address.

Center heads of whatever level should be typed with initial caps of major words, with extra space above and below the head, but with no other preparation (such as all caps or underline). Run-in paragraph heads should use period/dashes or colons as necessary.

Tabulations within text (lists of data, often in parallel columns) can be typed on the text page where they occur, but they should not contain rules or formal, numbered table heads.

Formal tables (numbered, with table heads, boxheads, stubs, rules) should be submitted as camera copy, but the author must contact the series section of the Press for editorial attention and preparation assistance before final typing of this matter.

Taxonomic keys in natural history papers should use the aligned-couplet form in the zoology and paleobiology series and the multi-level indent form in the botany series. If cross-referencing is required between key and text, do not include page references within the key, but number the keyed-out taxa with their corresponding heads in the text.

Synonymy in the zoology and paleobiology series must use the short form (taxon, author, year:page), with a full reference at the end of the paper under "Literature Cited." For the botany series, the long form (taxon, author, abbreviated journal or book title, volume, page, year, with no reference in the "Literature Cited") is optional.

Footnotes, when few in number, whether annotative or bibliographic, should be typed at the bottom of the text page on which the reference occurs. Extensive notes must appear at the end of the text in a notes section. If bibliographic footnotes are required, use the short form (author/brief title/page) with the full reference in the bibliography.

Text-reference system (author/year/page within the text, with the full reference in a "Literature Cited" at the end of the text) must be used in place of bibliographic footnotes in all scientific series and is strongly recommended in the history and technology series: "(Jones, 1910:122)" or ". . . Jones (1910:122)."

Bibliography, depending upon use, is termed "References," "Selected References," or "Literature Cited." Spell out book, journal, and article titles, using initial caps in all major words. For capitalization of titles in foreign languages, follow the national practice of each language. Underline (for italics) book and journal titles. Use the colon-parentheses system for volume/number/page citations: "10(2):5-9." For alignment and arrangement of elements, follow the format of the series for which the manuscript is intended.

Legends for illustrations must not be attached to the art nor included within the text but must be submitted at the end of the manuscript—with as many legends typed, double-spaced, to a page as convenient.

Illustrations must not be included within the manuscript but must be submitted separately as original art (not copies). All illustrations (photographs, line drawings, maps, etc.) can be intermixed throughout the printed text. They should be termed **Figures** and should be numbered consecutively. If several "figures" are treated as components of a single larger figure, they should be designated by lowercase italic letters (underlined in copy) on the illustration, in the legend, and in text references: "Figure 9b." If illustrations are intended to be printed separately on coated stock following the text, they should be termed **Plates** and any components should be lettered as in figures: "Plate 9b." Keys to any symbols within an illustration should appear on the art and not in the legend.

A few points of style: (1) Do not use periods after such abbreviations as "mm, ft, yds, USNM, NNE, AM, BC." (2) Use hyphens in spelled-out fractions: "two-thirds." (3) Spell out numbers "one" through "nine" in expository text, but use numerals in all other cases if possible. (4) Use the metric system of measurement, where possible, instead of the English system. (5) Use the decimal system, where possible, in place of fractions. (6) Use day/month/year sequence for dates: "9 April 1976." (7) For months in tabular listings or data sections, use three-letter abbreviations with no periods: "Jan, Mar, Jun," etc.

Arrange and paginate sequentially EVERY sheet of manuscript—including ALL front matter and ALL legends, etc., at the back of the text—in the following order: (1) title page, (2) abstract, (3) table of contents, (4) foreword and/or preface, (5) text, (6) appendixes, (7) notes, (8) glossary, (9) bibliography, (10) index, (11) legends.
